

Synergistic insecticidal mixtures

5 The invention relates to synergistic insecticidal mixtures of one or more spinosyns and agonists or antagonists of nicotinic acetylcholine receptors and to their use for controlling animal pests.

10 It is already known that spinosyns can be used for controlling insects (WO 97/00265, WO 93/09126, WO 94/20518, US-5 362 634, US-5 202 242, US-5 670 364, US-5 227 295, see also DowElanco trade magazine Down to Earth, Vol. 52, No. 1, 1997).

However, spinosyns on their own do not always exhibit satisfactory insecticidal activity.

15 Furthermore, it is known that agonists and antagonists of nicotinic acetylcholine receptors can be used for controlling insects.

20 It has now been found that mixtures of spinosyns and at least one agonist or antagonist of acetylcholine receptors of the formula (III) are synergistically effective and suitable for controlling animal pests. Owing to this synergism, it is possible to employ considerably lower amounts of active compounds, i.e. the activity of the mixture is greater than the activity of the individual components.

25 The spinosyns are known compounds. The fermentation product (A 83543) described in US 5 362 634 comprises various compounds which are referred to as spinosyn A, B, C etc. (cf. WO 97/00265, WO 93/09126 and WO 94/20518). The spinosyns can be represented by the formulae (I) and (II) below.

"Express Mail" mailing label number EV 236881395 US

Date of Deposit December 12, 2003

I hereby certify that this paper or fee is being deposited with the United States Postal Service "Express Mail Post Office to Addressee" service under 37 CFR 1.10 on the date indicated above and is addressed to the Commissioner of Patents and Trademarks, Alexandria, VA 22313-1450.

Semisynthetic spinosyns of the formula (Ia)

in which

A and B each represent a single bond, a double bond or an epoxide unit,

10 R represents  or R^{8'}-O,

R¹ represents hydrogen or methyl,

R², R³ and R⁴ independently of one another each represent C₁-C₄-alkyl, C₁-C₄-halogenoalkyl, C₁-C₄-alkylcarbonyl or protected hydroxyl,

R⁵ represents hydrogen, C₁-C₄-alkyl, C₁-C₄-alkylamino or represents
5 alkylhydroxylamino of the formula $\begin{array}{c} \text{-N-OR}^{11} \\ | \\ \text{OR}^{10} \end{array}$,

in which

R¹⁰ and R¹¹ independently of one another each represent hydrogen,
10 C₁-C₄-alkyl or C₁-C₅-alkylcarbonyl,

R⁶ represents hydrogen or methyl,

R⁷, R⁸ and R^{8'} independently of one another each represent C₁-C₄-alkyl, C₁-C₄-
15 halogenoalkyl or C₁-C₄-alkylcarbonyl or represent protected amino
and

R⁹ represents methyl or ethyl

are also known (WO 97/00 265).

20 The compounds disclosed in WO 97/00 265 are expressly incorporated into the
present application by way of reference.

The mixtures according to the invention comprise at least one spinosyn of the
25 formula (I), (Ia) or (II).

Preference is given to synergistic mixtures with at least one spinosyn of the formula
(I) or (II).

Particular preference is given to synergistic mixtures which comprise a mixture of spinosyn A and spinosyn D, where the ratio of spinosyn A to spinosyn D is generally between approximately 80:20 and approximately 98:2, and where preference is given to a value of approximately 85:15.

5

Very particular preference is given to using Spinosad (see, for example, DowElanco trade magazine Down to Earth, vol. 52, No. 1, 1997 and literature cited therein) which essentially consists of a mixture of spinosyn A and spinosyn D in a ratio of approximately 85:15.

10

Use is made, in particular, of the fermentation product A 83543 known from US-5 362 634 which comprises approximately 85 to 90% of spinosyn A, approximately 10 to 15% of spinosyn D and smaller amounts of the spinosyns B, C, E, F, G, H and J.

15

It is also possible to use the acid addition salts described therein.

The agonists and antagonists of the nicotinic acetylcholine receptors are known compounds which are known from the following publications:

10

All the generic formulae and definitions described in these publications, and also the individual compounds described therein, are expressly incorporated herein by reference.

15

Some of these compounds are summarized under the term nitromethylenes, nitro-
imines and related compounds.

Preferably, these compounds can be summarized under the formula (III)

20

in which

R represents hydrogen or represents optionally substituted radicals selected from the group consisting of acyl, alkyl, aryl, aralkyl, heterocyclyl, heteroaryl or heteroarylalkyl;

25

A represents a monofunctional group selected from the group consisting of hydrogen, acyl, alkyl, aryl or represents a bifunctional group which is linked to the radical Z;

- E represents an electron-withdrawing radical;
- X represents the radicals $-\text{CH}=\text{}$ or $=\text{N}-$, where the radical $-\text{CH}=\text{}$ may be linked to the radical Z instead of an H atom;

5

- Z represents a monofunctional group selected from the group consisting of alkyl, $-\text{O}-\text{R}$, $-\text{S}-\text{R}$,

10

where the radicals R are identical or different and are as defined above,

or represents a bifunctional group which is linked to the radical A or the radical X.

15

Particular preference is given to compounds of the formula (III) in which the radicals have the following meaning:

- R represents hydrogen and represents optionally substituted radicals selected from the group consisting of acyl, alkyl, aryl, aralkyl, heterocyclalkyl, heteroaryl, heteroarylalkyl.

20

Examples of acyl radicals are formyl, alkylcarbonyl, arylcarbonyl, alkylsulphonyl, arylsulphonyl, (alkyl)-(aryl)-phosphoryl, which may themselves be substituted.

25

Examples of alkyl are C_1 - C_{10} -alkyl, in particular C_1 - C_4 -alkyl, specifically methyl, ethyl, i-propyl, sec- or t-butyl, which may themselves be substituted.

Examples of aryl are phenyl, naphthyl, in particular phenyl.

Examples of aralkyl are phenylmethyl, phenethyl.

An example of heterocyclylalkyl is the radical  .

5

Examples of heteroaryl are heteroaryl having up to 10 ring atoms and N, O, S, in particular N, as heteroatoms. Specific examples are thienyl, furyl, thiazolyl, imidazolyl, pyridyl, benzothiazolyl, pyridazinyl.

10

Examples of heteroarylalkyl are heteroarylmethyl, heteroarylethyl having up to 6 ring atoms and N, O, S, in particular N, as heteroatoms, in particular optionally substituted heteroaryl as defined under heteroaryl.

15

Substituents which may be mentioned by way of example and by way of preference are:

20

alkyl having preferably 1 to 4, in particular 1 or 2, carbon atoms, such as methyl, ethyl, n- and i-propyl and n-, i- and t-butyl; alkoxy having preferably 1 to 4, in particular 1 or 2, carbon atoms, such as methoxy, ethoxy, n- and i-propyloxy and n-, i- and t-butyloxy; alkylthio having preferably 1 to 4, in particular 1 or 2, carbon atoms, such as methylthio, ethylthio, n- and i-propylthio and n-, i- and t-butylthio; halogenoalkyl having preferably 1 to 4, in particular 1 or 2, carbon atoms and preferably 1 to 5, in particular 1 to 3, halogen atoms, the halogen atoms being identical or different, and preferred halogen atoms being fluorine, chlorine or bromine, in particular fluorine, such as trifluoromethyl, hydroxyl; halogen, preferably fluorine, chlorine, bromine and iodine, in particular fluorine, chlorine and bromine, cyano; nitro; amino; monoalkyl- and dialkylamino having preferably 1 to 4, in particular 1 or 2, carbon atoms per alkyl group, such as methylamino, methylethylamino n- and i-propylamino and methyl-n-butylamino; carboxyl; carbalkoxy having

25

preferably 2 to 4, in particular 2 or 3, carbon atoms, such as carbomethoxy and carboethoxy; sulpho (SO_3H); alkylsulphonyl having preferably 1 to 4, in particular 1 or 2, carbon atoms, such as methylsulphonyl and ethylsulphonyl; arylsulphonyl having preferably 6 or 10 arylcarbon atoms, such as phenylsulphonyl, and also heteroaryl-amino and heteroarylalkyl-amino such as chloropyridyl-amino and chloropyridylmethyl-amino.

A represents hydrogen or represents an optionally substituted radical selected from the group consisting of acyl, alkyl, aryl, which are preferably as defined under R, A furthermore represents a bifunctional group. Examples include optionally substituted alkylene having 1 to 4, in particular 1 to 2, C atoms, examples of substituents being the substituents which have been mentioned further above (and where the alkylene groups may be interrupted by heteroatoms from the group consisting of N, O, S).

A and Z together with the atoms to which they are attached may form a saturated or unsaturated heterocyclic ring. The heterocyclic ring may contain a further 1 or 2 identical or different heteroatoms and/or heterogroups. Preferred heteroatoms are oxygen, sulphur or nitrogen, and preferred heterogroups are N-alkyl, where the alkyl of the N-alkyl group contains preferably 1 to 4, in particular 1 or 2, carbon atoms. Examples of alkyl include methyl, ethyl, n- and i-propyl and n-, i- and t-butyl. The heterocyclic ring contains 5 to 7, preferably 5 or 6 ring members.

Examples of compounds of the formula (III) in which R and Z together with the atoms to which they are attached form a ring include the following:

in which

E, R and X are each as defined above and further below.

- 5 E represents an electron-withdrawing radical, specific examples being NO₂, CN, halogenoalkylcarbonyl such as halogeno-C₁-C₄-alkylcarbonyl, for example COCF₃, alkylsulphonyl (for example SO₂-CH₃), halogeno-alkylsulphonyl (for example SO₂CF₃) and with particular preference NO₂ or CN.

X represents $-\text{CH}=\text{}$ or $-\text{N}=\text{}$.

5 Z represents an optionally substituted radical selected from the group consisting of alkyl, $-\text{OR}$, $-\text{SR}$, $-\text{NRR}$, where R and the substituents are preferably as defined above.

Z may, in addition to the ring mentioned above, together with the atom to which it is attached and the radical

instead of X, form a saturated or unsaturated heterocyclic ring. The heterocyclic ring may contain a further 1 or 2 identical or different heteroatoms and/or heterogroups. Preferred heteroatoms are oxygen, sulphur or nitrogen and preferred heterogroups are N-alkyl, where the alkyl or N-alkyl group contains preferably 1 to 4, preferably 1 or 2, carbon atoms. Examples of alkyl include methyl, ethyl, n- and i-propyl and n-, i- and t-butyl. The heterocyclic ring contains 5 to 7, preferably 5 or 6, ring members. Examples of the heterocyclic ring include pyrrolidine, piperidine, piperazine, hexamethyleneimine, morpholine and N-methylpiperazine.

15

20

The agonists and antagonists of the nicotinic acetylcholine receptors are particularly preferably compounds of the formula (III) in which

where

n represents 0, 1 or 2, and preferably represents 1,

5 subst. represents one of the substituents mentioned above, especially halogen, in particular chlorine, and A, Z, X and E are as defined above.

10

The following compounds are specific examples:

Very particularly preferred agonists and antagonists of the nicotinic acetylcholine receptors are compounds of the following formulae:

in particular a compound of the following formulae

(IIIg)

or

(IIIh)

(III i)

or

(IIIk)

or

(III l)

(III m)

Very particular preference is given to the compounds of the formulae (IIIa), (IIIk), (III).

Furthermore, very particular preference is given to the compounds of the formulae (IIIe), (IIIg), (IIIh), (III m), (IIIc).

The active compound mixtures are suitable for controlling animal pests, in particular insects, arachnids and nematodes, encountered in agriculture, in forests, in the protection of stored products and in the hygiene sector, and they are tolerated well by plants and have favourable toxicity to warm-blooded animals. They are active against normally sensitive and resistant species and against all or some stages of development. The abovementioned pests include:

From the order of the Isopoda, for example *Oniscus asellus*, *Armadillidium vulgare* and *Porcellio scaber*.

From the order of the Diplopoda, for example *Blaniulus guttulatus*.

From the order of the Chilopoda, for example *Geophilus carpophagus* and *Scutigera* spp.

From the order of the Symphyla, for example *Scutigereilla immaculata*.

From the order of the Thysanura, for example *Lepisma saccharina*.

From the order of the Collembola, for example *Onychiurus armatus*.

From the order of the Orthoptera, for example *Acheta domesticus*, *Gryllotalpa* spp., *Locusta migratoria migratorioides*, *Melanoplus* spp. and *Schistocerca gregaria*.

From the order of the Blattaria, for example *Blatta orientalis*, *Periplaneta americana*, *Leucophaea maderae* and *Blattella germanica*.

From the order of the Dermaptera, for example *Forficula auricularia*.

From the order of the Isoptera, for example *Reticulitermes* spp.

From the order of the Phthiraptera, for example *Pediculus humanus corporis*, *Haematopinus* spp., *Linognathus* spp., *Trichodectes* spp. and *Damalinia* spp.

5 From the order of the Thysanoptera, for example *Hercinothrips femoralis*, *Thrips tabaci*, *Thrips palmi* and *Frankliniella accidentalis*.

10 From the order of the Heteroptera, for example *Eurygaster* spp., *Dysdercus intermedius*, *Piesma quadrata*, *Cimex lectularius*, *Rhodnius prolixus* and *Triatoma* spp.

15 From the order of the Homoptera, for example *Aleurodes brassicae*, *Bemisia tabaci*, *Trialeurodes vaporariorum*, *Aphis gossypii*, *Brevicoryne brassicae*, *Cryptomyzus ribis*, *Aphis fabae*, *Aphis pomi*, *Eriosoma lanigerum*, *Hyalopterus arundinis*, *Phylloxera vastatrix*, *Pemphigus* spp., *Macrosiphum avenae*, *Myzus* spp., *Phorodon humuli*, *Rhopalosiphum padi*, *Empoasca* spp., *Euscelis bilobatus*, *Nephotettix cincticeps*, *Lecanium corni*, *Saissetia oleae*, *Laodelphax striatellus*, *Nilaparvata lugens*, *Aonidiella aurantii*, *Aspidiotus hederae*, *Pseudococcus* spp. and *Psylla* spp.

20 From the order of the Lepidoptera, for example *Pectinophora gossypiella*, *Bupalus piniarius*, *Cheimatobia brumata*, *Lithocolletis blancardella*, *Hyponomeuta padella*, *Plutella xylostella*, *Malacosoma neustria*, *Euproctis chrysorrhoea*, *Lymantria* spp., *Bucculatrix thurberiella*, *Phyllocnistis citrella*, *Agrotis* spp., *Euxoa* spp., *Feltia* spp., *Earias insulana*, *Heliothis* spp., *Mamestra brassicae*, *Panolis flammea*, *Spodoptera* spp., *Trichoplusia ni*, *Carpocapsa pomonella*, *Pieris* spp., *Chilo* spp., *Pyrausta nubilalis*, *Ephestia kuehniella*, *Galleria mellonella*, *Tineola bisselliella*, *Tinea pellionella*, *Hofmannophila pseudospretella*, *Cacoecia podana*, *Capua reticulana*, *Choristoneura fumiferana*, *Clysia ambiguella*, *Homona magnanima*, *Tortrix viridana* and *Cnaphalocerus* spp.

30 From the order of the Coleoptera, for example *Anobium punctatum*, *Rhizophorthera dominica*, *Bruchidius obtectus*, *Acanthoscelides obtectus*, *Hylotrupes bajulus*,

- Agelastica alni, Leptinotarsa decemlineata, Phaedon cochleariae, Diabrotica spp.,
 Psylliodes chrysocephala, Epilachna varivestis, Atomaria spp., Oryzaephilus
 surinamensis, Anthonomus spp., Sitophilus spp., Otiorrhynchus sulcatus,
 Cosmopolites sordidus, Ceuthorrhynchus assimilis, Hypera postica, Dermestes spp.,

 Ptinus spp., Niptus hololeucus, Gibbium psyllioides, Tribolium spp., Tenebrio
 molitor, Agriotes spp., Conoderus spp., Melolontha melolontha, Amphimallon solsti-
 tialis and Costelytra zealandica.
- 10 From the order of the Hymenoptera, for example Diprion spp., Hoplocampa spp.,
 Lasius spp., Monomorium pharaonis and Vespa spp.
- From the order of the Diptera, for example Aedes spp., Anopheles spp., Culex spp.,
 Drosophila melanogaster, Musca spp., Fannia spp., Calliphora erythrocephala,
 15 Lucilia spp., Chrysomyia spp., Cuterebra spp., Gastrophilus spp., Hyppobosca spp.,
 Stomoxys spp., Oestrus spp., Hypoderma spp., Tabanus spp., Tannia spp., Bibio
 hortulanus, Oscinella frit, Phorbia spp., Pegomyia hyoscyami, Ceratitis capitata,
 Dacus oleae, Tipula paludosa, Hylemyia spp. and Liriomyza spp.
- 20 From the order of the Siphonaptera, for example Xenopsylla cheopis and Cerato-
 phyllus spp.
- From the class of arachnids, for example Scorpio maurus, Latrodectus mactans,
 Acarus siro, Argas spp., Ornithodoros spp., Dermanyssus gallinae, Eriophyes ribis,
 25 Phyllocoptruta oleivora, Boophilus spp., Rhipicephalus spp., Amblyomma spp.,
 Hyalomma spp., Ixodes spp., Psoroptes spp., Chorioptes spp., Sarcoptes spp.,
 Tarsonemus spp., Bryobia praetiosa, Panonychus spp., Tetranychus spp.,
 Hemitarsonemus spp. and Brevipalpus spp.
- 30 The plant-parasitic nematodes include, for example, Pratylenchus spp., Radopholus
 similis, Ditylenchus dipsaci, Tylenchulus semipenetrans, Heterodera spp., Globodera

spp., Meloidogyne spp., Aphelenchoides spp., Longidorus spp., Xiphinema spp., Trichodorus spp. and Bursaphelenchus spp.

The synergistic effect is particularly pronounced if the active compounds in the active compound combinations are present at certain ratios by weight.

5

The ratio of the compounds of the formulae (I) and/or (II) employed and of the compound(s) of the formula (III), and the total amount of the mixture, depends on the type and the occurrence of the insects. For each application, the optimum ratios and total amounts to be employed can in each case be determined by test series. In general, the ratio of the compounds of the formulae (I) and/or (II) and the compound(s) of the formula (III) is from 1:100 to 100:1, preferably from 1:25 to 25:1 and particularly preferably from 1:5 to 5:1. These are parts by weight.

10

15

The active compound mixtures according to the invention can be present in their commercial formulations and in the use forms prepared from these formulations, in a mixture with other active compounds, such as insecticides, attractants, sterilants, acaricides, nematocides, fungicides, growth-regulating substances or herbicides. The insecticides include, for example, phosphoric esters, carbamates, carboxylic esters, chlorinated hydrocarbons, phenylureas, substances prepared by microorganisms. Specific co-components for mixtures are the insecticides and fungicides mentioned above.

20

Examples of insecticides which may optionally be admixed include:

25

phosphoric esters, such as azinphos-ethyl, azinphos-methyl, α -1(4-chlorophenyl)-4-(O-ethyl, S-propyl)phosphoryloxy-pyrazole, chlorpyrifos, coumaphos, demeton, demeton-S-methyl, diazinon, dichlorvos, dimethoate, ethoate, ethoprophos, etrimfos, fenitrothion, fenthion, heptenophas, parathion, parathion-methyl, phosalone, poxim, pirimiphos-ethyl, pirimiphos-methyl, profenofos, prothiofos, sulfprofos, triazophos and trichlorphon;

30

carbamates, such as aldicarb, bendiocarb, α -2-(1-methylpropyl)-phenyl methyl-carbamate, butocarboxim, butoxycarboxim, carbaryl, carbofuran, carbosulfan, cloethocarb, isoprocarb, methomyl, oxamyl, pirimicarb, promecarb, propoxur and thiodicarb;

5 organosilicon compounds, preferably dimethyl(phenyl)silyl-methyl 3-phenoxybenzyl ethers, such as dimethyl-(4-ethoxyphenyl)-silylmethyl 3-phenoxybenzyl ether or (dimethylphenyl)-silyl-methyl 2-phenoxy-6-pyridylmethyl ethers such as, for example, dimethyl-(9-ethoxy-phenyl)-silylmethyl 2-phenoxy-6-pyridylmethyl ether or [(phenyl)-3-(3-phenoxyphenyl)-propyl]((dimethyl)-silanes such as, for example, (4-ethoxyphenyl)-[3-(4-fluoro-3-phenoxyphenyl-propyl)]dimethyl-silane, silafluofen;

10 pyrethroids, such as allethrin, alphamethrin, bioresmethrin, byfenthrin, cycloprothrin, cyfluthrin, decamethrin, cyhalothrin, cypermethrin, deltamethrin, alpha-cyano-3-phenyl-2-methylbenzyl 2,2-dimethyl-3-(2-chloro-2-trifluoro-methylvinyl)cyclopropane-carboxylate, fenpropathrin, fenfluthrin, fenvalerate, flucythrinate, flumethrin, fluvalinate, permethrin, resmethrin and tralomethrin;

15 nitroimines and nitromethylenes, such as 1-[(6-chloro-3-pyridinyl)-methyl]-4,5-dihydro-N-nitro-1H-imidazole-2-amine (imidacloprid), N-[(6-chloro-3-pyridyl)-methyl]-N²-cyano-N¹-methylacetamide (NI-25);

20 abamectin, AC 303, 630, acephate, acrinathrin, alanycarb, aldoxycarb, aldrin, amitraz, azamethiphos, *Bacillus thuringiensis*, phosmet, phosphamidon, phosphine, prallethrin, propaphos, propetamphos, prothoate, pyraclofos, pyrethrins, pyridaben, pyridafenthion, pyriproxyfen, quinalphos, RH-7988, rotenone, sodium fluoride, sodium hexafluorosilicate, sulfotep, sulfuryl fluoride, tar oils, teflubenzuron, tefluthrin, temephos, terbufos, tetrachlorvinphos, tetramethrin, O-2-tert-butyl-pyrimidin-5-yl-o-isopropyl-phosphorothiate, thiocyclam, thiofanox, thiometon, tralomethrin, triflumuron, trimethacarb, vamidothion, *Verticillium Lacanii*, XMC, xylylcarb, benfuracarb, bensultap, bifenthrin, bioallethrin, MERbioallethrin (S)-cyclopentenyl isomer, bromophos, bromophos-ethyl, buprofezin, cadusafos, calcium polysulphide, carbophenothion, cartap, quinomethionate, chlordane, chlorfenvinphos, chlorfluazuron, 25 chlormephos, chloropicrin, chlorpyrifos, cyanophos, beta-cyfluthrin, alpha-cypermethrin, cyophenothrin, cyromazine, dazomet, DDT, demeton-S-methylsulphone,

30

diafenthiuron, dialifos, dicrotophos, diflubenzuron, dinoseb, deoxabenzofos, diazacarb,
 disulfoton, DNOC, empenhrin, endosulfan, EPN, esfenvalerate, ethiofencarb, ethion,
 etofenprox, fenobucarb, fenoxycarb, fensulfothion, fipronil, flucycloxuron, flufenprox,
 flufenoxuron, fonofos, formetanate, formothion, fosmethilan, furathiocarb, heptachlor,
 5 hexaflumuron, hydramethylnon, hydrogen cyanide, hydroprene, IPSP, isazofos,
 isofenphos, isoprothiolane, isoxathion, iodfenphos, kadethrin, lindane, malathion,
 mecarbam, mephosfolan, mercurous chloride, metam, metarthizium, anisopliae,
 methacrifos, methamidophos, methidathion, methiocarb, methoprene, methoxychlor,
 methyl isothiocyanate, metholcarb, mevinphos, monocrotophos, naled, Neodiprion
 10 sertifer NPV, nicotine, omethoate, oxydemeton-methyl, pentachlorophenol, petroleum
 oils, phenothrin, phenthoate, phorate.

The other insecticides that may optionally be admixed may also be from the class of the compounds of the general formula (I).

15

Fungicides which may optionally be admixed are preferably:

Triazoles such as:

20 azaconazole, propiconazole, tebuconazole, cyproconazole, metconazole, amitrole,
 azocyclotin, BAS 480F, bitertanol, difenoconazole, fenbuconazole, fenchlorazole,
 fenethanil, fluquinconazole, flusilazole, flutriafol, imibenconazole, isozofos,
 myclobutanil, paclobutrazol, (\pm)-cis-1-(4-chlorophenyl)-2-(1H-1,2,4-triazol-1-yl)-
 cycloheptanol, tetraconazole, triadimefon, triadimenol, triapenthenol, triflumizole,
 triticonazole, uniconazole and their metal salts and acid adducts.

25

Imidazoles such as:

30 imazalil, pefurazoate, prochloraz, triflumizole, 2-(1-tert-butyl)-1-(2-chlorophenyl)-3-
 (1,2,4-triazol-1-yl)-propan-2-ol, thiazolecarboxanilides such as 2',6'-dibromo-2-methyl-
 4-trifluoromethoxy-4'-trifluoromethyl-1,3-thiazole-5-carboxanilide, 1-imidazolyl-1-(4'-
 chlorophenoxy)-3,3-dimethylbutan-2-one and their metal salts and acid adducts.

 yl}-3-methoxyacrylate, methyl (E),(E)-2-{2-[(4-chlorophenyl)-methyloximinomethyl]-

phenyl}-3-methoxyacrylate, methyl (E)-2-{2-[6-(2-n-propylphenoxy)-1,3,5-triazin-4-yloxy]phenyl}-3-methoxyacrylate, methyl (E),(E)-2-{2-[(3-nitrophenyl)methyl-oximinomethyl]phenyl}-3-methoxyacrylate;

5 **Succinate dehydrogenase inhibitors such as:**

fenfuram, furcarbanil, cyclofluramid, furmecyclo, seedvax, metsulfovax, pyrocarbolid, oxycarboxin, shirlan, mebenil (mepronil), benodanil, flutolanil (Moncut);

naphthalene derivatives such as terbinafine, naftifine, butenafine, 3-chloro-7-(2-aza-2,7,7-trimethyl-oct-3-en-5-ine);

10 sulphenamides such as dichlofluanid, tolylfluanid, folpet, fluorfolpet; captan, captofol; benzimidazoles such as carbendazim, benomyl, furathiocarb, fuberidazole, thio-phonatmethyl, thiabendazole or their salts;

morpholine derivatives such as fenpropimorph, falimorph, dimethomorph, dodemorph, aldimorph, fenpropidine and their arylsulphonates, such as, for example, p-15 toluenesulphonic acid and p-dodecylphenyl-sulphonic acid;

dithiocarbamates, cufraneb, ferbam, mancozeb, maneb, metam, metiram, thiram zeneb, ziram;

benzothiazoles, such as 2-mercaptobenzothiazole;

benzamides, such as 2,6-dichloro-N-(4-trifluoromethylbenzyl)-benzamide;

20 boron compounds, such as boric acid, boric esters, borax;

formaldehyde and formaldehyde-releasing compounds, such as benzyl alcohol mono-(poly)-hemiformal, oxazolidine, hexa-hydro-S-triazines, N-methylolchloroacetamide, paraformaldehyde, nitropyrin, oxolinic acid, tecloftalam;

25 tris-N-(cyclohexyldiazeniumdioxy)-aluminium, N-(cyclo-hexyldiazeniumdioxy)-tri-butyltin or K salts, bis-N-(cyclohexyldiazeniumdioxy)-copper, N-methylisothiazolin-3-one, 5-chloro-N-methylisothiazolin-3-one, 4,5-dichloro-N-octylisothiazolin-3-one, N-octyl-isothiazolin-3-one, 4,5-trimethylene-isothiazolinone, 4,5-benzoisothiazolinone, N-methylolchloroacetamide;

30 aldehydes, such as cinnamaldehyde, formaldehyde, glutaraldehyde, β -bromo-cinnamaldehyde;

thiocyanates, such as thiocyanatomethylthiobenzothiazole, methylenebisthiocyanate, and the like;

quaternary ammonium compounds, such as benzyldimethyltetradecylammonium chloride, benzyldimethyldodecylammonium chloride, didecyldimethylammonium chloride;

iodine derivatives, such as diiodomethyl p-tolyl sulphone, 3-iodo-2-propinyl alcohol, 4-chlorophenyl-3-iodopropargyl formal, 3-bromo-2,3-diiodo-2-propenyl ethylcarbamate, 2,3,3-triiodoallyl alcohol, 3-bromo-2,3-diiodo-2-propenyl alcohol, 3-iodo-2-propinyl n-butylcarbamate, 3-iodo-2-propinyl n-hexylcarbamate, 3-iodo-2-propinyl cyclohexylcarbamate, 3-iodo-2-propinyl phenylcarbamate;

phenol derivatives, such as tribromophenol, tetrachlorophenol, 3-methyl-4-chlorophenol, 3,5-dimethyl-4-chlorophenol, phenoxyethanol, dichlorophene, o-phenylphenol, m-phenylphenol, p-phenylphenol, 2-benzyl-4-chlorophenol and their alkali metal and alkaline earth metal salts;

microbicides having an activated halogen group, such as chloroacetamide, bronopol, bronidox, tectamer, such as 2-bromo-2-nitro-1,3-propanediol, 2-bromo-4'-hydroxyacetophenone, 2,2-dibromo-3-nitrile-propionamide, 1,2-dibromo-2,4-dicyanobutane, β -bromo- β -nitrostyrene;

pyridines, such as 1-hydroxy-2-pyridinethione (and their Na, Fe, Mn, Zn salts), tetrachloro-4-methylsulphonylpyridine, pyrimethanol, mepanipyrim, dipyrithion, 1-hydroxy-4-methyl-6-(2,4,4-trimethylpentyl)-2(1H)-pyridine;

metal soaps, such as tin naphthenate, copper naphthenate, zinc naphthenate, tin octoate, copper octoate, zinc octoate, tin 2-ethylhexanoate, copper 2-ethylhexanoate, zinc 2-ethylhexanoate, tin oleate, copper oleate, zinc oleate, tin phosphate, copper phosphate, zinc phosphate, tin benzoate, copper benzoate and zinc benzoate;

metal salts, such as copper hydroxycarbonate, sodium dichromate, potassium dichromate, potassium chromate, copper sulphate, copper chloride, copper borate, zinc fluorosilicate, copper fluorosilicate, in particular mixtures with fixatives;

oxides, such as tributyltin oxide, Cu_2O , CuO , ZnO ;

dialkyldithiocarbamates, such as Na and Zn salts of dialkyldithiocarbamates, tetramethylthiuram disulphide, potassium N-methyl-dithiocarbamate;

nitriles, such as 2,4,5,6-tetrachloroisophthalodinitrile, disodium cyano-dithioimido-carbamate;

quinolines, such as 8-hydroxyquinoline, and their Cu salts;

mucochloric acid, 5-hydroxy-2(5H)-furanone;

5 4,5-dichlorodithiazolinone, 4,5-benzodithiazolinone, 4,5-trimethylenedithiazolinone, 4,5-dichloro-(3H)-1,2-dithiol-3-one, 3,5-dimethyl-tetrahydro-1,3,5-thiadiazine-2-thione, N-(2-p-chlorobenzoyl-ethyl)-hexaminium chloride, potassium N-hydroxy-methyl-N'-methyl-dithiocarbamate,

2-oxo-2-(4-hydroxy-phenyl)acetohydroxamic acid chloride,

10 phenyl-(2-chloro-cyano-vinyl)sulphone,

phenyl-(1,2-dichloro-2-cyano-vinyl)sulphone;

Ag-, Zn- or Cu-containing zeolites, alone or enclosed in polymeric active compounds, or else mixtures of more than one of the abovementioned fungicides.

15 The active compound content of the use forms prepared from the commercial formulations can vary within wide limits. The active compound concentration of the use forms can be from 0.0000001 to 95% by weight of active compound, preferably between 0.0001 and 1% by weight.

20 The mixtures of active compounds can be converted into the customary formulations, such as solutions, emulsions, suspensions, powders, foams, pastes, granules, aerosols, active-compound-impregnated natural and synthetic materials, very fine encapsulations in polymeric substances and in coating compositions for seed, furthermore in formulations with smokes, such as fumigating cartridges, fumigating cans, fumigating
25 coils and the like, and also ULV cold fogging and warm mist formulations.

These formulations are prepared in a known manner, for example by mixing the active compounds with extenders, that is, liquid solvents, pressurized liquefied gases and/or solid carriers, optionally with the use of surfactants, that is, emulsifiers and/or
30 dispersants, and/or foam-forming agents. If the extender used is water, it is also possible to use, for example, organic solvents as auxiliary solvents. Suitable liquid

solvents are essentially: aromatics, such as xylene, toluene or alkylnaphthalenes, chlorinated aromatics or chlorinated aliphatic hydrocarbons, such as chlorobenzenes, chloroethylenes or methylene chloride, aliphatic hydrocarbons, such as cyclohexane or paraffins, for example mineral oil fractions, alcohols, such as butanol or glycol and also their ethers and esters, ketones, such as acetone, methyl ethyl ketone, methyl isobutyl ketone or cyclohexanone, strongly polar solvents, such as dimethylformamide and dimethyl sulphoxide, and also water; by liquefied gaseous extenders or carriers are meant liquids which are gaseous at ambient temperature and under atmospheric pressure, for example aerosol propellant, such as halogenated hydrocarbons and also butane, propane, nitrogen and carbon dioxide; suitable solid carriers are: for example ground natural minerals, such as kaolins, clays, talc, chalk, quartz, attapulgite, montmorillonite or diatomaceous earth, and ground synthetic minerals, such as finely divided silica, alumina and silicates; suitable solid carriers for granules are: for example crushed and fractionated natural rocks such as calcite, marble, pumice, sepiolite and dolomite, as well as synthetic granules of inorganic and organic meals, and granules of organic material such as sawdust, coconut shells, maize cobs and tobacco stalks; as emulsifiers and/or foam-forming agents there are suitable: for example nonionic and anionic emulsifiers, such as polyoxyethylene fatty acid esters, polyoxyethylene fatty alcohol ethers, for example alkylaryl polyglycol ethers, alkylsulphonates, alkyl sulphates, arylsulphonates and also protein hydrolysates; suitable dispersing agents are: for example lignin-sulphite waste liquors and methylcellulose.

Tackifiers such as carboxy-methylcellulose and natural and synthetic polymers in the form of powders, granules or latices, such as gum arabic, polyvinyl alcohol and polyvinyl acetate, and also natural phospholipids, such as cephalins and lecithins, and synthetic phospholipids, can be used in the formulations. Further additives may be mineral and vegetable oils.

It is possible to use colorants such as inorganic pigments, for example iron oxide, titanium oxide and Prussian Blue, and organic dyestuffs, such as alizarin dyestuffs, azo

dyestuffs and metal phthalocyanine dyestuffs, and trace nutrients such as salts of iron, manganese, boron, copper, cobalt, molybdenum and zinc.

5 The formulations in general comprise between 0.1 and 95 per cent by weight of active compound mixture, preferably between 0.5 and 90 per cent by weight of active compound mixture.

The mixtures according to the invention can be applied via the soil.

10 The mixtures according to the invention can be applied via the leaf.

The mixtures according to the invention can be employed particularly advantageously for seed dressing.

15 Furthermore, the mixtures according to the invention can preferably be applied via the soil.

Furthermore, it is also possible to apply the mixtures according to the invention via an irrigation system, for example via the water for irrigation.

20

Furthermore, it has been found that it is also possible to apply the active components of the mixtures according to the invention separately, for example, to apply the spinosyn(s), advantageously in the form of a suitable formulation, onto the soil, and to use the compound or the compounds of the formula (III), advantageously in the
25 form of a suitable formulation, via the leaf, or vice versa.

Use examples

Example 1

5 **Activity of folia-insecticidal formulations against sucking pests**

The insecticidal activity was examined using the critical concentration test. From each of the test preparations, an aqueous dilution series is made by diluting the individual concentrations by the factor 5.

10

To determine any synergistic activity, weakly active concentrations of chloro-nicotinyl compounds are combined with various active compound concentrations of Tracer (Spinosad).

15 The test plants used are cabbage plants at the one-leaf stage which are infested by *Myzus persicae* (green peach aphid). The shoots or leaves with the aphids are dipped for approximately 3 seconds into the respective liquors. The experiments are subsequently placed in a greenhouse at 21°C and 65% relative atmospheric humidity.

20 Evaluation for mortality is carried out after 2 and 7 days.

Act. compd. conc. = active compound concentration

a.i. = active ingredient

Example 2**Critical concentration test/root-systemic action**

- 5 Test insect: **Aphis fabae**
 Solvent: 4 parts by weight of acetone
 Emulsifier: 1 part by weight of alkylaryl polyglycol ether

10 To produce a suitable preparation of active compound, 1 part by weight of active compound is mixed with a stated amount of solvent, the stated amount of emulsifier is added and the concentrate is diluted with water to the desired concentration.

15 The active compound preparation is mixed intimately with soil. The concentration of the active compound in the preparation is of virtually no importance, only the amount by weight of active compound per unit volume of soil, which is given in ppm (= mg/l), being decisive. The treated soil is filled into 250 ml pots and the pots are planted with pre-germinated broad beans. In this manner, the active compound can be taken up from the soil by the roots of the plants and transported into the leaves.

20 To demonstrate the root-systemic effect, the leaves are populated with the abovementioned test animals after 7 days. After a further 7 days, the test is evaluated by estimating the dead animals. The root-systemic effect of the active compound is deduced from the destruction figures. It is 100% when all the test animals have been killed and 0% when just as many test insects are still alive as in the untreated control.

25

Active compounds, application rates and results are shown in the table below:

Table
Root-systemic
Aphis fabae

Active compound		Degree of destruction in % at active compound concentrations
According to the invention	Spinosad	40 ppm = 0 %
	compound (IIIa)	0.035 ppm = 50 %
	Spinosad	40 ppm
	+ compound (IIIa)	+ 0.035 ppm = 80 %

Example 3**Critical concentration test/root-systemic action**

- 5 Test insect: **Phaedon cochleariae larvae**
 Solvent: 4 parts by weight of acetone
 Emulsifier: 1 part by weight of alkylaryl polyglycol ether

10 To produce a suitable preparation of active compound, 1 part by weight of active compound is mixed with the stated amount of solvent, the stated amount of emulsifier is added and the concentrate is diluted with water to the desired concentration.

15 The active compound preparation is mixed intimately with soil. The concentration of the active compound in the preparation is of virtually no importance, only the amount by weight of active compound per unit volume of soil, which is given in ppm (= mg/l), being decisive. The treated soil is filled into 500 ml pots, 8 cabbage seeds are placed at a depth of approximately 1 cm, the hole is filled and the soil surface is pressed down gently.

20 To demonstrate the root-systemic effect, the leaves are populated with the abovementioned test animals after 9 days. After a further 3 days, the test is evaluated by estimating the leaf-feeding in the treated and in the untreated plant. The effect is 100% if, compared with the untreated control, only little feeding damage is observed;
25 it is 0% when the entire cabbage has been eaten.

Active compounds, application rates and results are shown in the table below.

Table
Root-systemic
Phaedon cochleariae larvae

Active compound	Degree of destruction in % at active compound concentrations
